EPHEMERIDES

OF THE

Celestial Motions

AND

ASPECTS,

ECLIPSES of the LUMINARIES, &c.

FOR

XX YEARS.

Beginning *Anno* 1682. and ending *An.* 1701.

Calculated according to Art from New Tables, agreeing to the most Correct Observations of the ablest Astronomers in this Mercurial Age.

Accommodated to the Meridian of the Honourable City of *LONDON*; and for the service and benefit of all the Sons of *URANIA*, now made publick.

By *JOHN GADBURY*, Student in Physick and Astrology.

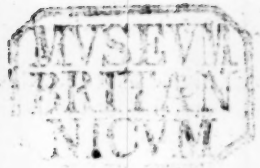

LONDON,

Printed by *J. Macock*, for the Company of STATIONERS, MDCLXXX.

Bought at the Sale of
the Rt. Honble Joseph
Addison's Library. —
May 27. 1799 —
at Leigh & Sotheby's — York Street,
Covent Garden. —

& presented as a slight
mark of regard to my friend
Dr. Hutton, Woolwich. —

C Burney. —
Greenwich.

BRITAN
NICVM

TO THAT
TRULY LEARNED
AND LOYAL GENTLEMAN,
MY MOST WORTHY FRIEND,
THE HONOURABLE
GEORGE PENRODDOCK
OF *BREAD-CHALKE*,
IN THE COUNTY OF *WILTS*,
ESQUIRE;

JOHN GADBURY

(In teſtimony of the Honour he ows him,
And in humble Acknowledgment
Of many ſingular favours received)

Doth Dedicate the enſuing
TWENTY YEARS
EPHEMERIDES:

Wiſhing unto him,
And to his thrice Honoured and Virtuous LADY,
Long Life and Happy Days.

TO THE Ingenious READERS.

Gentlemen!

IN the Year of our Lord 1672. I emitted into the World for your ſervice, an Ephemerides of the Celeſtial Motions for Ten Years then to come; which being now nearly expired, and well knowing the want of ſuch Books, and how few there are that be able (and of thoſe few, ſcarce any willing) for ſuch performances, I was deſirous to make an Addition unto that Firſt Volume, that Artiſts (at leaſt in my time) might not be unfurniſh'd of ſo neceſſary and uſeful a Work.

But Calculations of that kind being very tedious and laborious to perform, and that by reaſon of my conſtant Avocations and daily Practice, I found a want of time to put, compleatly, by my own hands, ſuch my deſires into Act, ſo ſoon as it ſhould be needful, and the world require it: I thought convenient, therefore, to conſult my ingenious Friend and Quondam Pupil, Mr. J. Merifield, about the ſame, (a Perſon well verſed in Aſtrology and Aſtronomy, and in other parts of the Mathematiques alſo:) and accordingly have made uſe of his pains in the ſeveral Calculations hereof, giving him my brief Notes for his better Expedition and Conveniency in ſo toilſome and tediouſly troubleſome an undertaking: So that at the length, by Gods bleſſing, and his ſeaſonable aſſiſtance, I have been enabled to preſent the world with the following Tract, or Ephemerides for Twenty Years.

A work it is of ſo great and various pains, and of ſo mean and inconſiderable a Profit or Requital, beſides what I

may hope to receive from the Breaſts of worthy and grateful Men, that he, who ſhall undertake the like, had need to have a great reſpect for the Employment. For Porters and Carmen receive much greater encouragement for their daily and delightful Drudgery, performed in Pedeſtral employments and Whiſtling. Hard fate of Students, thus to labour for the world, and then only to meet a reward that is ſcarce worthy the very ruling of the Paper they write on!

Howbeit, I have a hope (though I cannot promiſe the world to perform it for them my ſelf) that this my Friend will not (like a faint-hearted Souldier, for meeting with ſome diſcouragement in the firſt of his Minerval attempts) throw away his Mathematical Arms as wholly uſeleſs, but adventure a ſecond onſet; and, as opportunity may give him leave, preſent the world with an Addition of Twenty Years hereunto; which if but well and carefully performed, will be of ſo great Emolument and Uſe to the world, that nothing of its kind can do it an equal ſervice; beſides the particular honour that thereby will accrew to our Engliſh Nation, when the Vertuoſi of of this Mercurial Age ſhall be thereby acquainted and convinced, That the Genii *of Countries (as the Learned* Childrey *thought of their Horoſcopes) ſeem conſtantly to travel, and keep no fixed abode: and that the happy* Dæmons *or* Angels *of Science which formerly inſpired* Greece, Italy, Germany, *&c. will now be found to reſide in* England, *and are there contriving how to erect Monuments and Towers of Mathematical Learning, to the honour of the Stars and* Urania.

Syzyg. Juſt. Anno 1653. prope finem.

And, let it not ſeem ſtrange, I pray ye, that I have thus made uſe of my Friend in the moſt of this laborious undertaking; for there is no Ingenious Artiſt, or other, that knows the great trouble and tediouſneſs of ſuch an undertaking, but will believe I have

have done no more herein, than the great Origanus, *and* Argol, *&c. have done before me in the compiling their vaſt Tomes of this kind, each of them being for Threeſcore Years together.*

Beſides, I am at the preſent employ'd about a far larger work, which if it ſhall pleaſe God to bleſs me with time and leiſure to perfect, will (I morally hope) be of ſuch ſatisfaction and uſe to the truly Ingenious, as well Philoſophers, Phyſicians, Hiſtorians as Aſtrologers, that they will thereby be taught to believe, that I have not ſpent my time altogether idly, and like a Drone; but may, probably, think me worthy their thanks, (which is all I aim at) for imparting ſuch my endeavours with an honeſt and upright intention for their benefit.

If therefore, through inadvertency, or want of a due examination, there ſhould have happen'd any over-great Errours (as in works of the beſt and moſt exact performance, (man being the Author) is unavoidable) the Ingenious Reader will, as taught by the Laws of Civility, allow ſome grains to my foreſaid Apology, and ſome more, in conſideration of Humane frailty, if himſelf be not a beaſt.

But, if any over-curious ſhall contend, that theſe Ephemerides *do not exactly correſpond with moſt of the Tables Aſtronomical now in credit among us; or that they are leſs perfect in ſome reſpects, than my firſt part was; I anſwer, firſt, That the Planets Motions were Calculated by my beforeſaid Friend Mr.* J. M. *and I preſume them to be moderately true: for to prove a work of this Nature is to be at the pains of a New Calculation, it being not to be done any otherwiſe. Secondly, I let ſuch objectors know, that there have been, are, and ever will be great differences amongſt Aſtronomers concerning the true places of the Planets and Stars: and that* Kepler, *the Phœnix of Aſtronomy, is by late obſervers, found very much to fail, even in the places of the Sloweſt-paced Planets.*

Nay,

Nay, the Ingenious Mercator *ſets all others a wondering, when he differs from them, not only in the Planets Motions, but even in the places of the fixed Stars likewiſe; and that ſo remarkably, that he makes* Cor Leonis *to be in* ♌ 26° *and* 667 *parts, whereas that Star is generally reckon'd to be in* ♌ 25° 18′, *and that glorious Star* Spica Virginis, *which we commonly preſume to be in* ♎ 19° 15′, *the Learned* Mercator *placeth in* ♎ 20ᵈ 650 *parts, and ſo ſemblable in all the reſt of his Catalogue. And who knows, but that he may be as true, or perhaps truer, than any other Aſtronomer? It is not one Man, or one Age, that can ſet theſe differences to right. Nor could ever any mortal be yet ſo happy, as to enter the* Sanctum Sanctorum *of verity. The Deities indulge us a favour in earneſt, if they ſuffer us to approach the outer Courts of the beauteous* Urania, *and there to gaze at a diſtance, upon her dazling Glories.*

Laſtly, whereas it may chance to be objected by ſome that the Operations and Types of the ſeveral Luminarian Eclipſes, that happen within the Circle of theſe Ephemerides, are wholly omitted, as alſo the ſeveral Figures of the World, or of the Sun's *ingreſs into* Aries; *which later I did preſent the Readers withal in my Ten Years* Ephemerides: *I muſt requeſt the Ingenious Reader to know, that I had no other deſign therein, than to whet on our common Calendariographers, (thoſe common Plunderers of* Ephemerides) *to Diligence and Induſtry; and alſo to prevent the ſwelling of the Book it ſelf unto too great a bulk, leſt it ſhould bear a price proportionate, and ſo become of purchaſe too dear and uneaſie for many of our honeſt Well-wiſhers to the Honour and Service of Science; whoſe good (even equal with the greateſt) and profit of every kind, is herein, and ſhall ever be ſtudied by*

Gentlemen!

Yours and Aſtrologies meaneſt Servant,

JO. GADBURY.

Brick Court by the Dean's Yard, Weſtminſter.

To his worthy Friend

Mr *JOHN GADBURY*

ON THIS

EPHEMERIDES.

WHat wondrous pleaſing Proſpects have we here
Of things ſo diſtant that are ſeen ſo near?
Now Time is mounted on a through-pac'd ſteed,
And travels as our Author has decreed:
The true Recorder of the Heav'ens and fate;
Urania's *chiefeſt Miniſter of State.*
The Ancients rectify'd the Sun *and* Moon,
And could, perhaps, foretell a darkned Noon;
But his Hypotheſis *is ſo exact,*
That one may Hermes *to a Minute tract:*
And (tho' the Paradox *ſeem ne'r ſo great)*
When the Superiors joyn, a Figure ſet.
And notwithſtanding that Aſtræa's *fled,*
Here Jove *in* Libra *twice his Rays has ſpread:*
The Sons of Art oblig'd, amuſed ſee
All Truths in Hieroglyphick *Prophecie.*
Jaſon *no more will ſteal the Golden Fleece,*
Now Sol *guards* Aries *and the Sign of* * Greece; * m
And every Year does bounteouſly diſpence
To all the reſt his grateful Influence.
The Crowing Cock *the* Lyon *will not fear,*
When Zeus *and* Chronos *are united there;*

Nor need the Scorpion *dread* Saturnine *foes,*
While Powerful Mars *their Advocates oppoſe.*
Come all ye Favourites of the Starry Court,
And you that in Olympian *Orbits ſport;*
Joyn all your Voices in the Trump of fame,
To Celebrate our skilful Leaders Name.
States-men *may here employ a curious Eye,*
To ſee what Laws ſhall live, what Kingdoms dye:
The Country Farmer *by this Book ſhall know,*
When Spring *will wither, and when* Autumn *grow:*
And Galeniſts *of the right Time be ſure*
To gather Herbs, and undertake a Cure.
Next the learn'd Antiquary *claims his place,*
Admiring at the Planets *conſtant Race;*
Is jealous of his Honour, and at laſt
Believes that futures ſuperſede the paſt.
The Mariner *with lofty Sails diſplay'd,*
Sees Calms expire and boiſterous Tempeſts laid.
The letter'd Gallant that for Love prepares,
Diſcovers Venus *Combuſt, and bewares.*
Then to the Solemn Oratour is ſhown
Swift Mercury's *utmoſt Elongation.*
The Ladies laſt crowd hither to enquire
When Luna *does advance and when retire.*
Brave Gadbury *to all theſe Clients writes,*
And arm'd with Truth their Candour he invites.
Let thy great Fame reach the Platonick *Year,*
And touch the furtheſt Apogæon *Sphear,*
Till Phœbus *ſhall diſmiſs his Charioteer.*

F. T. Philo-Ephemeridiſt.

ON

On the following Twenty Years

EPHEMERIDES

OF THE

Indefatigable Mr JOHN GADBURY.

MY Commendation's needleſs, Line, or Letter,
Or home-ſpun Verſe, thy labours do it better:
Yet take my mite. Come all you Sons of Art
And ſee what Order's from Confuſion brought:
What ſcarce was ten Degrees in old time ſhown,
Is nearly now unto few Minutes known:
Not an Eclipſe, Conjunction, *can paſs o're,*
But here we ſee it Twenty Years before.
When Mars *and* Saturn *(Maſters of diſorder)*
Denounce to Mankind Famins, Battles, Murder.
When the two Silver *Stars befriend our hopes,*
And kindly do behold our Horoſcopes.
When Nimble winged Hermes *ſlily ſteals*
Cloſe by his Maſters fiery Chariot Wheels.
When Lady Luna *(Empreſs of the Night)*
Puts on her Sable Veil, *or borrowed bright.*
What of Mans fate *do on theſe* Stars *depend,*
None but the Starry Σοφοὶ *underſtand.*
Our Author *here with his admired pains,*
Firſt knows, *then* ſhows, *'tis more for* good, *than* gains.
Well, worthy Friend, go on, thy Fame with men
Shall ſurely meet a long Alchocoden.

J. Partridge.

Carmen Acroſticon in laudem Authoris.

J ove *be thy ſpeed t'ward Heavens* Helicon,
O *ver the* Alps *of Nature thou art gone,*
H *overing above our* Atmoſphere; *thy Soul*
N *ever's at* reſt *but roves from* Pole *to* Pole:
G *reat's thy endeavour, greater thy will to doe;*
A *rts have their ſplendor,* Urim *and* Thummim *too.*
D *iſloyally they act, who dare deny*
B *y* hearty thanks *to pay thy pains and thee.*
U rania *choſe thee, whom the gods confirm'd,*
R *uler o'th'* Stars *whoſe motion's here diſcern'd;*
Y *ou* Rule *the* Stars, *though* Cæſar *Rules the Land.*

John Partridge *Amator Studiorum.*

THE

THE PROEM OR INTRODUCTION.

I Need not here go about to acquaint you with the Name, Derivation, Nature, or Uſe of an *Ephemerides*, having done that already in my firſt *Ephemerides*, very plainly and largely, and to the capacity of every indifferent Reader. But, foraſmuch as many Perſons may happen upon this Book, that have not, or it may be, cannot eaſily get the former Part, I thought it but reaſonable to let them know in this place, That an *Ephemeris* or *Ephemerides*, in an Aſtrological ſence, is only a methodical plain Table, exhibiting the *Planets* various *Motions* and *Aſpects*, accommodated to each day in the Year, for ſo many Years as it is made, or deſigned to continue; together with the Eclipſes of the *Sun* and *Moon*, as they happen ſucceſſively therein: And alſo ſhews the Diſtinctions of the *Biſſextiles* or *Leap-years*, from thoſe of common Years, with the difference between the *Julian* and *Gregorian* Accounts. And of the following *Ephemerides* you may pleaſe to take this brief Explanation for the better underſtanding thereof.

Firſt then, you muſt know there are Seven Planents conſtantly moving in the Heavens, and are therefore called Erratique or wandering Stars. Secondly, that there are alſo twelve Signs into which the Heavens are divided; in, and through which Signs the Planets do continually move and paſs. Thirdly, there are five Aſpects which theſe Planets do make each unto other in the ſaid Signs according to their ſeveral diſtances. Fourthly, there is alſo the Head and Tail of the Dragon, commonly called the Moons North

North and South Node, the former of which is noted in the *Ephemerides*, whereunto the latter is ever Oppoſite.

Now the ſeveral Planets, Signs, and Aſpects thus ſpoken of, are known by the following Names and Characters. And firſt of the Signs.

♈	*Aries.*	Northern Signs.	♎	*Libra.*	Southern Signs.
♉	*Taurus.*		♏	*Scorpio.*	
♊	*Gemini.*		♐	*Sagittarius.*	
♋	*Cancer.*		♑	*Capricorn.*	
♌	*Leo.*		♒	*Aquarius.*	
♍	*Virgo.*		♓	*Piſces.*	

The Planets Names and Characters, *&c.*

☉	*The Sun.*	♀	*Venus.*
♄	*Saturn.*	☿	*Mercury.*
♃	*Jupiter.*	☽	*Luna.*
♂	*Mars.*	☊	*Dragons Head.*

The Five Aſpects.

☌	*Conjunction.*	□	*Quadrate.*	△	*Trine.*
✶	*Sextile.*			☍	*Oppoſition.*

As the ſeveral Planets are conſtantly paſſing through theſe twelve Signs, and are ever to be found in one part or other of them, ſo the work of this *Ephemeris* is to acquaint you where, when, and how to find them. And that my directions to you therein may be plain and Methodical, I ſhall give a compleat and plenary Example in the Month of *January* 1682. which Month, (as all the reſt of the Months) conſiſts of two Pages, a left and a right Hand Page, which I ſhall thus explain.

The

The Left Hand Page Explained.

The Left Hand Page of this *Ephemerids* conſiſts of Ten diſtinct Rows or Columns; in the firſt whereof you have the Days of the Week ſet down Numerically; and the Character of the *Sun* ☉ therein, tells you when it is *Sunday*, and how many there are in the Month.

In the Second Column you will find the place of the ☉ *Sun*, in each Sign, Degree, and Minute each Day of the whole Month. As to inſtance, the ☉ is in ♈ at the beginning of the Month, and continues in that Sign until the Ninth day thereof, and then enters ♒, and therein will be found until the end of the Month.

In the Third Column is declared the place of the ☽ *Moon* for every day of the Month at Noon, in Degrees and Minutes: And on the firſt day thereof, ſhe will be found 20 Degrees, 39 Minutes of ♒ *Aquarius*.

The Fourth Column holds the ☽ *Moons* Latitude in Degrees and Minutes; and the Letters M. and S. tell you whether it be Meridional or Septentrional, (*i. e.*) South or North, and how long it will continue ſo. And the Letters A. and D. acquaint you whether the Moon be Aſcending or Deſcending in her Latitude.

The Fifth Column contains the place of ♄ *Saturn* in Degrees and Minutes; and on the firſt day of *January* aforeſaid, you will find him to be in 4 Degrees, 23 Minutes of *Leo*, at Noon: And the Letter R. tells you that he is Retrograde, and (in reſpect of us) goeth backward in the Heavens.

The Sixth Column exhibits unto you the place of ♃ *Jupiter* in Degrees and Minutes; and on the firſt day of the aforeſaid *January*, you will find him in 14 Degrees, 50 Minutes of ♋ *Cancer*, and Retrograde alſo.

The Seventh Column gives you the place of ♂ *Mars* in Degrees and Minutes; and on the firſt day of *January* aforeſaid, you may find him in 15 Degrees, 46 Minutes of ♒ *Aquarius*.

The Eighth Column directs us unto the place of ♀ *Venus*; who on the ſaid firſt day of *January*, is found to be in 27 Degrees, 32 Minutes of ♐ *Sagittary*.

The

The Ninth Column makes known the place of ☿ *Mercury*, and acquaints us that on the ſaid firſt day of *January*, he is found to be in 28 Degrees, and 28 Minutes of ♐ *Sagittary*, at Noon.

The Tenth and laſt Column informs you with the place of the ☊ *Dragons Head*, (commonly called the North Node of the ☽ *Moon*) in whole Degrees; which is ſufficient for the Artiſt's purpoſe in all ordinary matters whatſoever, relating to Aſtrology, as indeed it might have been for the places of all the reſt of the Planets. For in things of the moſt exact and curious concernment, even the Learned *Kepler*, or *Eichſtade* themſelves are not totally relyed upon, (and therefore no future Calculator ought to be more truſted unto) but a New Calculation is required. You are to obſerve, that the ☋ *Dragons Tail* is ever Oppoſite to the *Dragons Head* in Sign and Degree, *&c.*

At the Foot of this Page are the Planets Latitudes to every tenth day of the Month, in Degrees and Minutes; and the Letters M. and S. tell you whether the ſame be Meridional or Septentrional. And thus is the Left Hand Page Explained.

The Right Hand Page Explained.

The Right Hand Page conſiſts of Eleven Spaces or Columns, as may be ſeen by the Eye. The Firſt whereof holds the Days of the Month in a Numerical order as did the firſt Column of the Left Hand Page, the Character of the *Sun* ☉ ſtanding for *Sunday*.

The Second Column contains the Days of the Week, as diſtinguiſhed by the Seven Hebdomaick Letters, A. B. C. D. E. F. G. and in this Year A. is the Sunday Letter, which is always noted with a Letter bigger than the reſt for diſtinction ſake.

The Third Column declares the Fixed and Moveable Feaſts, *&c.* as well thoſe of the *Roman* as the *Engliſh* Calendar, according to their Names mention'd againſt every Day of the Month whereon they happen. As on the firſt day of *January* is Printed the *Circumciſion* of our Lord, noted in an old Engliſh Character, which ſhews it to be a great Feſtival in the Church. On the ſecond day is mentioned the Birth of *Abel*, whom *Cain* ſlew, but in a different Character to that of the Circumciſion of our Lord, *&c.* Now

the

the firſt of theſe Feaſts falls upon the eleventh day of *January* in the *Roman* Church, and the ſecond of them falls upon the twelfth day, as appears to your view, by caſting your Eye over to the laſt Column of this Page.

The Fourth Column informs you of what Aſpects the ☽ *Moon* makes with the ☉ *Sun*, (as is intimated by the Title of *Lunar Aſpects* over head,) as for Example, on the third day of *January* you will find under ☉ in this Column, a ⚹ *Sextile*, with the number 17 under the ſame, which tells you, that ☽ the *Moon* makes a ⚹ *Sextile* Aſpect that day with the ☉ *Sun*, at 17 Hours Afternoon, or at five a Clock in the Morning on the fourth day.

The Fifth Column contains the ſeveral Aſpects the ☽ *Moon* makes with ♄ *Saturn* after the ſame manner, of which there needs no Example.

The Sixth Column exhibits the ſeveral Aſpects which ☽ the *Moon* makes with ♃ *Jupiter*, according to the like inſtance or method.

The Second Column directs you how to find the ſundry Aſpects which ☽ the *Moon* makes to *Mars*, and by the ſame rule alſo.

The Eighth Column makes known the ☽ *Moons* ſeveral rays or Aſpects which ſhe caſts to ♀ *Venus*, the ſame method being obſerved.

The Ninth Column informs you how ☽ the *Moon* makes her ſeveral Aſpects to the Planet ☿ *Mercury*, and after the ſame manner.

And, in theſe ſeveral Columns under ♄ *Saturn*, ♃ *Jupiter*, ♂ *Mars*, ♀ *Venus*, ☿ *Mercury* you will find theſe words or letters, *viz.* Or. and Oc. which words tell you, that the Planets to whom they relate, are either Oriental or Occidental of the *Sun*, and do accordingly either Riſe, or Set, before or after him.

The Tenth Column contains all the grand Mutual Aſpects, or ſuch rays that the Planets make among themſelves; together with the ☽ *Moon* her being with her North and South Nodes, *viz.* the *Head* or *Tail* of the *Dragon*: As for Example, againſt the ſecond day you will find ☽☊. which tells you, that ☽ the *Moon* is that day with ☊ the *Dragons Tail*: And on the ſeventh day of *January* you will find ☌♀☿, which informs you that ♀ *Venus* and ☿ *Mercury*

cury on that day are in ☌ *Conjunction.* Underſtand the like of the reſt.

The Eleventh Column gives us notice of the *Roman* or beyond Sea Account, and acquaints us that our firſt day of the Month is their eleventh day, and that our laſt day of the Month is their tenth day thereof: And after this manner you are to underſtand the whole *Ephemerides.*

I might here have taken occaſion to teach the Reader how to ſet a Figure of Heaven, and to give judgment thereupon; and alſo to have treated of ſundry other matters pertaining to this Art; but ſuch things better befitting the Introductions to Aſtrology, than an *Ephemerides*, I ſhall refer him therefore for Inſtruction in ſuch matters to my *Doctrine of Nativities*, or to Mr. *Partridge* his Aſtrological *Vade Mecum*, &c. wherein he may receive moſt plentiful ſatisfaction. And, indeed, *Ephemerides* are only of uſe unto ſuch Perſons, as have firſt been well grounded in the Principles of this Art.

Here

Here follow ſeveral Domifying Tables, for divers particular places, omitted in my former Ephemerides, *&c.*

For	*Oxford*,	Whoſe Latitude is	51° 42′
	Edinburgh,		57 6
	Newcaſtle,		55 3
	Nottingham,		53 2
	Colcheſter,		52 4
	Newport in the Iſle of *Wight*,		50 38

Which Tables are ſerviceable to all Towns, *&c.* near the ſaid Places, *viz.* Twenty or Thirty miles round; chiefly, Eaſtward and Weſtward of them: nay, Northward and Southward too, without any eminent error, eſpecially in Common Figures, as upon Queſtions, Elections, Decumbitures, *&c.* But, for Nativities, where the Artiſt would be exact, for the particular places mention'd only. And for all other places remote he ought to have recourſe to the Tables in my Doctrine of Nativities, whereby he is inſtructed to make Tables of Houſes for all Latitudes, from one Degree to ſixty Degrees.

A Table of Houſes for the Latitude of 51°. 42′. *ſerving the Famous City of* Oxford.

A Demonſtration of the Influence of the fixed Stars, from Obſervation and Experience; inſtanced in the Pleiades: To which is added, a Secret for the Mariner.

IN that Stupendious, yet Auſpicious Year of our Lord, 1660. (the year of his moſt Gracious Majeſties moſt happy Reſtauration) the Learned Dr. *Goad*, to evince it the more eminent and conſiderable, was pleaſed to publiſh a Diary of the Weather; thereby ſhewing us, how the Sun, Moon, and Stars do dayly magnifie God Almighty, and that the very Clouds and Winds have certain Laws by which they move, and cannot but obey. And, by way of Appendix to that Excellent Diary, he was ſo worthily kind to Learning, and the Men of this Age together, as to publiſh the following Demonſtration of Influence, *&c.* which becauſe that little Work is not eaſie to be gotten, and the ſaid Demonſtration is of ſo great uſe to all ſuch as ſtudy the Stars, *&c.* and I having an opportunity of the Preſs at this time for a reprinting thereof, thought fit to pray his Licence ſo to do; which he moſt readily conſented unto; and I accordingly do here publiſh the ſame, giving the Learned Doctor my hearty thanks for the liberty he hath herein ſo generouſly afforded me.

The Demonſtration is this.

The Pleiades are a Conſtellation pretty well known, of ſix or ſeven little diminutive Stars, cluſter'd together like (rather than to ſay nothing) to a bunch of Grapes, having place in that part or ſpace of Heaven which is ſcored out by the Aſtronomer, and call'd the 24 and 25 Degrees of *Taurus*; Southing at Mid-night about the beginning of *November*, (not unknown to the very Country-man, who by that token skills the lateneſs of the Night,) and riſing in the North-Eaſt ſomewhat late in the Evening, about the entrance of *September*, and ſo coming nearer and nearer, according as Winter approaches.

This

This Conſtellation (among others) is noted by *Ptolomy*, and the Antients before him, for turbulency; and though they pronounce only of their own Horiſons, (for I remember not that any of thoſe Sages flouriſhed near our home of Great *Britain*,) yet we ſhall find that their definition to agree to our Engliſh *Pleiades*; it does not change nature with the Clime: For, whether we conſider it in Oppoſition (that's the Aſpect we make choice of) to the *Sun* or the reſt of the Planets, (*Saturn* and *Jupiter* excepted, and good cauſe why; for the time is yet to come that our ſhort obſervation could catch either of them ſo poſited) we may find the Air temper'd for cold, wind, wet, and that ſo conſiderable, that the weather for the moſt part (ſeldom failing) breaks out into Winter weather (*i. e.*) wet, if not downright turbulency.

Thou glanceſt already upon the enſuing Table, and obſerveſt with an objection ready, that it is not always ſo: I beſeech you, who pretends it muſt be always ſo? that were to make this ſingle Aſpect a total Adequate efficient, by it ſelf alone; whereas we labour to convince the world, only, that it is to be reckon'd among the number of Cauſes, (but all cauſes are not total) duly and properly ſo called, ſuch as hath influence upon the Effect, and not a caſual ſtander by. We do not look therefore, being but a parcel Cauſe, that it ſhould always prove, as not being always ſuited with partners of ſtrength ſufficient to make up the remainder. There is a *deſunt cætera* ſometimes in the impreſſions of Nature: For it is eaſy to be reminded that there are (though now we conſider but one at once) five or ſix Planets vagrant in the Sky; and, though we conſider now but one place, yet there are 360. in the Heavens; all which are not filled with *Pleiades*, and ſuch cloſe Aſteriſms: there are ſome places bare and empty, or at leaſt ſo weakly ſpread with twinkling Lights, that they are not able to ſtir the body of Nature, or make Heaven Cap-ſick with a Cloud. The Aſtrologer that reckons any one Aſpect or Aſteriſm to be a ſole adequate Cauſe, what doth he do, but betray a whole body for the intereſt of one particular? This I ſuppoſe is a rational preventing of the Objection.

We begin therefore with the Sun's oppoſing our *Vergiliæ*; the oppoſite place to ♉ 23. 24. is ♏ 23. 24. and this we find to be

the Suns place in the month of *November* about the fifth, ſixth, ſeventh and eighth days; which appeared *Anno* 1652. thus, after this manner.

Days.	☉	☊	November 1652.

6	24	31	*High Winds, ſome clouds.*
7	25	32	*Cloudy, Rainy day and night.*
8	26	33	*Cloudy, Showry, Windy.*

Concordat cum priori.

	☉	☊	November 1654.
5	23°	16′	*Cloudy.*
6	24	17	*Cloſe, ſome miſling.*
7	25	17	*Froſt, ſharp Winds.*
8	26	18	*Fair, Froſty*——

Grant it to fail; yet that ſomething of moiſture, and the ſharp wind is a ſpice of the *Pleiades*, and without much begging may be yielded.

November

Days.	☉	☊	November 1655.
5	5[d]	23′	*Cloudy, misling at Sun-set.*
6	6	24	*Fair, overcast at Sun-set.*
7	7	25	*Windy, Cloudy, some Wet at Noon.*
8	8	26	*Blustering the Night before, Rain Morn. and Noon. Storms* P. M. *fall by coast.* This is to the time of our *Pleiades.*

	☉	☊	November 1656.
5	23°	47′	*Dark, Stormy, wetting.*
6	24	48	*Wind before day; flying Clouds, two or three drops.*
7	25	49	*A sad, wet, driving day.*
8	26	50	*High Winds before day, Rain at Noon.* Suspicious in some places. What think ye?

	☉	☊	November 1657.
5	23°	33′	*Dark, Wet, Windy.*
6	24	33	*Fair, high Winds, some Hail.*
7	25	34	*Fair, high Winds, Hail in some places.*
8	26	35	*Frost, Wind, Rain-like.*

Does it fail or no?

'Tis fair I grant, but 'tis high Wind, not without Hail, compare that with the sharp Wind above, and do not overlook the Wet that fell the fifth day.

Days.	☉	♏	November 1658.
5	23°	18′	*Froſt, Rain,* 5 P. M. *hard and conſtant.*
6	24	19	*Rain Morn. Miſling Noon, Wind and Wet,* P. M.
7	25	19	*Bluſtering all Night, Wet,* 9 M. *Cloudy till* 4 P. M.
8	26	20	*Cold and high winds* ——— Now I am partial, and think this is our influence; but I muſt leave it to thine own Obſervation: 'tis good ſometimes to beleive our ſelves.

And thus ſemblably doth ♀ and ☿ and ♂ (he is our Idol) but he doth not much beyond the *Sun* or ☿ if in ſlow motion; and therefore, though we can ſcarce refrain, we forbear.

But, thus could we inſtance from other Aſteriſms out of the Records of Nature, and bring in Froſt, Miſt, Lightning, Thunder belonging to their Conſtellations which will be ſure to own them; not omitting ſerenity and the determination of the Winds, which *Pliny* very ſenſibly reſolves, muſt have ſome dependance on ſome courſe natural, although then (nor yet indeed) fully known; and ſo it is moſt certain. I will not appeal to any thing done laſt year * tending that way; only I ſhall maintain that Paradox, I fear, and if I cannot perſwade others, pleaſe my ſelf: All my grounds, remember, lie upon Experience, and I am contented.

* *This Learned Author did the World the honour of imparting to it a Diary of the Weather for* 1659. *alſo, as well as* 1660.

Let me add then, now, what follows: for as for any the like Demonſtration of Influence from the Aſpects of the Planets among themſelves, it may well be ſuperſeded: for 'tis a *Quis neſcit*, among all obſervers. Who knows not that an Oppoſition of the *Sun* and *Saturn* inclines to Moiſture? an Oppoſition of *Jupiter* and *Mercury* to Wind and crude Air? The Table of theſe Aſpects is obvious, and the truth of the Definition daily experimented: So that now I may proceed to my Sea man, and what I promiſed him.

An

An obſervation for the Mariner.

THE foregoing Hiſtory of the *Pleiades* may be of ſome uſe to thee, if thou obſerveſt, at leaſt, the more frequent Aſpect of the *Moon* to that Aſteriſm, of which thou maiſt make trial every Month by day or night, thus: For if the weather be about that time untoward, I will be bound it ſhall not bate when the Moon comes to their Oppoſition; and if it be calm and orderly, I believe a nicer obſerver will deprehend ſome ſuch alteration as ſhall reach to a gale or brize of Wind for the moſt part. Yet this I reckon not to be the *Arcanum*. I would ſerve thee farther, if I could, by communicating ſome light to thy ſelf for the preſage, or at leaſt the ſuſpicion of foul weather.

There is no Amulet as I know againſt a Tempeſt, but what Theology teaches; for, as for the fortunate naming of Ships, you know I fear how little ſecurity is in it, how innocent however is the practice: If my memory deceive me not, I have often pitied Veſſels of hopeful denomination, whoſe ſtories have deſcrib'd their unfortunate ſinking.

I know not into how many of your hands theſe Sheets may come; or if they do, what faith you will lend to their inſtruction. Only, I do believe that every Tempeſt overpaſt, you might with a little conſultation pick up ſome light toward a notice of the next: 'Tis but having recourſe to that Book which your Ship cannot be without, and remark not the Aſpects only, but rather the place and poſition of each Planet for Sign and Degree that ruled in the hubbub. And after a little obſervation you ſhall find that there are ſome *Foul Holes*, as I call them, in the very Heavens; ſuch critical places there, as well as on the ſhoreſide, or under water: and I could willingly ſet up my Sea-mark at each of them, that you might be admoniſhed. I know I ſhall have anger, but I may be ſomewhat excuſed, I hope, as being in a matter concerning life and ſafety; the ſafety of thoſe, (whether Merchant or Man of War) who hazzard both, even for my own private intereſt, the private being involved in the publick.

If Characters then may be truſted, and ſolid Truth be exhibited by them,

them, I ſhall deſire you once and again to review theſe enſuing parts of the Zodiack, beginning at *Aries*: and do not let the number affright thee; for if there be any thing in our pretenſions, 'tis better we were acquainted with the moſt, than ſuc their ignorance: yet muſt not you look that they are all equally hazzardous; ſome are more, ſome are leſs; and if I miſtake not, more or leſs there is in each of them.

	♈	♎		♉	♏		♊	♐
		1		3	3		2	2
		3			6		4	
	4	5		10				8
About	11	10	About	14		About	15	13
Degree			Degree	17	17	Degree	17	16
	13	12					19	18
	18	19			21			20
	22	22			24		26	26
	26			27	29		29	29

This for the firſt three Signs and their oppoſites. The Character is the Sign, and the Number notes the Degree, and the word [About] for the moſt part notes the antecedent aud conſequent Degrees to the Degree expreſſed: as ♈ 4. notes 3. (the antecedent) and 5. (the conſequent) as well as 4. (the midſt) and this for brevity ſake as well as ſecurity, we thought good to do.—The other ſix follow.

So

So have you the worſt that I can whiſper unto you, which I called a *Secret*, *&c.* I confeſs to invite your curioſity, but I hope not to your loſs: for look back into your Journals, and bring me thence a rouſing Tempeſt, one, two, or a third: Upon perusal of my Calculator, I fear I ſhall find ſome of the fore ſpecified places in a knot and complication at that very inſtant: Try, I pray, and truſt me as you find; 'tis without end to inſtance in all; let me mention one or two confeſſed notorious ones, where our faith cannot be queſtion'd.

Some years ago, when the *Scots* were at *Worceſter*, we in *England* felt a terrible Tempeſt of Lightning and Thunder, *Auguſt* 22th at Night, being *Friday*, and *Saturday* in the Forenoon *Auguſt* 23th 1651. I was no obſerver then, but I remember the time well: and how ſate the Heavens then? ——Thus,

		♄	♋	♆	♐	♂	♍	☉	♏	♀	♌	☿	♏	☽	♈
Auguſt 1651.	22	24°	53′	2	24	20	7	8	40	16	23	14	33	2°	
	23	24	59	2	31	20	47	9	38	17	37	16	22	17	

I remember much on this ſide of that a harmful Tempeſt of Wind, *&c.* commonly call'd the *Protector's Tempeſt*, believed to be his laſt Convoy, *Auguſt* 30. 1658. The Scheme of the Heaven was thus——

	♄	♎	♆	♌	♂	♍	☉	♏	♀	♎	☿	♎	☽	♒
Auguſt 30. 1658.	17°	19′	4	11	24	14	16	45	21	59	4	13	19°	

Nearer yet: no longer than *January* laſt, the 23th and 25th days, 1659. raging Tempeſt of Winds all the night before, and ſome claps of Thunder for the 23th, on the 25th harm done by the violence of Winds: we know there were Aſpects, let them be reckon'd; but the Heavens were poſited thus——

		♄	♍	♆	♌	♂	♑	☉	♒	♀	♒	☿	♒	☽	
January 1659.	23	☌	37′	7° R.	15	4	53	13	48	28 R.	35	27 R.	58	18°	♊
	25	0	37	6	59	6	21	15	50	27	25	27	20	12	♋

Let

Let this ſuffice, for if I ſhould name any others, and you not remember them, our labour would be vain; half a hundred ſuch inſtances, which you on grace of God may make in your life time of Voyages, will work you over to our perſwaſion: and if any one Navigator or Naturaliſt ſhould, confeſſing the thing, deſire to know the reaſon, the Hiſtory of the Stars in their ſeveral Conſtellations relating to theſe points of Heaven; I anſwer, This is not a place for the Evolution of ſuch *Magnalia* of Nature, they require larger room to breath in: this narrow compaſs would impriſon and ſtifle the largeneſs of ſuch notions. This which I have done, I was forced to do, I have profeſſed ſo much.

Thus far this Learned worthy Perſon.

I could improve this eminent Truth of ſtarry Influences with a dozen years of my own daily Experience; and was once in the mind ſo to do; but that the Learned Author of this moſt clear Demonſtration, being (as indeed many years he hath been) employed in ſo excellent a Meteorological work for that very end and purpoſe, I ſhall forbear my more minute endeavours therein, (leſt thereby I might though unwillingly, prejudice his more worthy pains) and refer the Ingenious Reader for farther ſatisfaction to his moſt Learned and Elaborate Treatiſe thereof, ſo long expected, and now ſhortly to be Publiſhed.

OF THE
LUMINARIAN ECLIPSES
In this Year, 1682.

THere will be two Eclipses of the Moon, and those total and nearly Central too; but one of them only will be visible to us in *England*.

The First will be on *February* the Eleventh Day, about Eleven of the Clock at Night; it will be Celebrated in almost four Degrees of the Celestial *Virgin*. This Eclipse will be very great, and of long continuance, because it happens within a very little of the Moons North-Node; and will (I hope) invite the curious in Astronomy to make Observations thereof, and communicate them.

The Second will be on *August* the eighth day, in five and twenty degrees of *Aquarius*, and happens about our six of the Clock in the Morning, and therefore invisible as to us: but in it self will be as great an Eclipse as the former.

The Sun also will twice come within Ecliptical boundaries, *viz.* on *January* the 28th, and on *July* the 24th, but it will be so small a matter that it's not material to be minded. However, those that are curious, and furnished with fit instruments may observe them on the said days, the first about 4 hours P. M. the second about 9 hours A. M.

☞ On *September* the twelfth, will be Celebrated a famous Conjunction of the two Celestial Malefick, *Saturn* and *Mars*, in 17 of the Regal Sign *Leo*. 'Tis of eminent concernment to such Countries, Cities, or Persons, that have that Sign for their Horoscope, M. C. Sun or Moon.

OF THE

ECLIPSES

Which will happen in this Year, 1683.

THere will be in this Year three Eclipſes of the two great Luminaries of Heaven: Two of the Moon, and one of the Sun.

The Firſt will be of the Sun, on *January* the 17th, near Three of the Clock Afternoon, in eight degrees of *Aquarius*; and if the Air be clear, may be ſeen of us in *England*, there being almoſt nine Digits of the Suns body obſcured.

The ſecond will be of the Moon on *February* the firſt day, about Three Afternoon, in 23 degrees of *Leo*; but inviſible as to us, the Sun being above the Earth.

The Third will be of the Moon alſo, on *July* the 28th, at Eight of the Clock before noon. It is Celebrated in 14° of ♒. This is inviſible to us alſo.

☞ In this year there happens a famous Conjunction of *Saturn* and *Jupiter* in *Leo*; thoſe Planets meet twice or thrice in that fiery regal Sign, and Aſtrologically boad great alterations in the World. I will give you *Andrew Argol*'s words thereof.

Cum celebretur Conjunctio Superiorum Saturni & Jovis, *in trigono igneo, Antiquorum conſenſu mutationes magnæ contingent, & generales conſtitutiones; ac de facili Dominiorum mutationes.*

Beſides theſe great Conjunctions, I find the fiery Planet *Mars* corrupting the Sign of Juſtice near 8 months together, *viz.* from *November* the 26th 1682. unto *July* the 12th this year. A tranſit of miſchievous tendency in earneſt.

OF

OF THE
ECLIPSES
OF THE
LUMINARIES
Which will happen in this Year, 1684.

FOur times will the Inhabitants of the Earth be deprived of the Light of the Sun and Moon in this Year, *viz.* twice of each.

The Firſt will be an Eclipſe of the Sun on *January* the ſixth day, at ſix a Clock at Night, in twenty and ſix degrees of the Celeſtial *Goat*: The Eclipſe will be great, *viz.* eleven digits of the Suns body will be obſcured; but inviſible to us in *England*, becauſe the Sun will be beneath the Weſtern Horizon. It will be viſible in the *Weſt-Indies*, *&c.*

The Second will be an Eclipſe of the Moon on *June* the ſeventeenth, about three of the Clock in the Morning, in ſix degrees of *Capricorn*, and viſible to us. It will be but a ſmall Eclipſe, yet worthy Obſervation.

The Third will be an Eclipſe of the Sun, in 22 degrees of *Cancer*, on *July* the ſecond day, about three of the Clock in the Afternoon. It will be a great Eclipſe, (*Argol* maketh it to be total) and about two thirds of the Suns body will be obſcured from our ſight. It begins in the ninth Angle of the Heavens, and ends in the eighth Houſe, *viz.* the Angle of Death.

The Fourth will be a defect of the Moon on *December* the eleventh day, at eleven of the Clock at Night. 'Tis Celebrated in One degree of *Cancer*. It will be a great Eclipſe, almoſt total, and viſible to us in *England*.

☞ On *October* the 3d is Celebrated a famous Conjunction of *Saturn* and *Mars*, in 13° of *Virgo*. It's of wrangling and treacherous import.

OF THE

LUMINARIAN ECLIPSES

Which will happen in this Year, 1685.

THE Inhabitants of this Terrene Star will in this Year be three times ſubject to the Luminarian obſcurity, (*i. e.*) once the Sun, and twice the Moon will be Eclipſed from their ſight.

The Firſt will be of the Moon, on *June* the ſixth day, about ſix of the Clock at Night, in twenty ſix degrees of the Celeſtial *Archer*, or *Sagittary*: It will be inviſible to us in *England*, by reaſon of the Moons being below the Eaſtern Horizon at the time thereof.

The Second will be a defect of the Sun on *June* the 21° at eight a Clock at Night, in ten degrees of *Cancer*; but will ſcarcely be viſible to us, becauſe the Sun is then juſt ſetting: beſides, it will be but a ſmall Eclipſe.

The Third will be an Eclipſe of the Moon on *November* the 30th day about eleven of the Clock at Night. It will be a viſible, total, and Central Eclipſe; and admirably well worth the induſtrious Aſtronomers obſervation. It is Celebrated in nineteen degrees of the *Twins*, or the Celeſtial *Gemini*. *Mercury* oppoſeth the Moon in this condition, and *Saturn* caſts an envious Quadrate to him, and both the Luminaries. *Verbum ſat.*

☞ The warlike Planet *Mars* hath a tedious tranſit thorough the Celeſtial ſign *Sagittarius* this Year, *viz.* from *February* the tenth day, to *September* the eleventh day; compleatly ſeven Months. *Sagittary* is the dignities of *Jupiter*. Ha! I hope the Souldier doth not intend to turn Preacher any more in theſe Nations. *Mars* is not for promoting, but pulling down Religion.

AN

AN EPHEMERIS OF THE Celestial Motions AND ASPECTS,

For the Year of our LORD, 1686.

Respecting the Meridian of *London*.

OF THE
ECLIPSES
OF THE
LUMINARIES
In this Year, 1686.

IN this Year there will be but one Eclipſe only, and that will be of the Moon, *viz.* on *November* the nineteenth day, at eleven of the Clock at Night. It will be a great Eclipſe, and well worthy the obſervation of the Ingenious Sons of *Urania*. It is Celebrated in eight degrees of *Gemini*, near that violent fixed Star, called *Oculus Tauri*, or the *Bulls-eye*. It is an Eclipſe that begins in the Midheaven, and ends in the ninth Angle. *Jupiter* and *Mercury* beſiege the Sun, and all oppoſe the Eclipſed Moon; and this from Stars as violent, as ſhe her ſelf is near.

I ſhould have conceived that there would have been a ſolar Eclipſe at the ſynod of the Sun and Moon, on *May* the twelfth, at ſeven of the Clock in the Morning: but that I find at that Conjunction, the Parallax of the Moon, and her apparent Latitude, are greater than the ſum of the Sun and Moons Semidiameters; therefore there can be no New Moon Eclipſe then.

☞ There is Celebrated in this year a notable Conjunction of *Saturn* and *Mars*, in ſeven degrees of *Libra*, on *October* the twenty third day, and although this Conjunction be of ill influence unto all Perſons and places concern'd herein, yet it will be very delightful to obſerve the Planets conjoyn'd to riſe near *Arcturus*, and the Virgins ſpike, two hours before the Sun riſes, ſeveral Mornings together.

AN

AN EPHEMERIS OF THE Celestial Motions AND ASPECTS,

For the Year of our LORD, 1687.

Respecting the Meridian of *London*.

OF THE

ECLIPSES

OF THE

LUMINARIES

Which happen in this Year, 1687.

IN this year of 1687. there will be but two Eclipſes, and both of the Sun. The one of them happens before the Sun's Apogæon, and the other after it, and both of them almoſt Central; ſo that there can be no Full Moon Eclipſe in this year. Yet *Argol* is of opinion that the Full Moon on *May* 17. in the Morning may be Eclipſed. But time will prove the contrary.

The firſt Eclipſe of the Sun will be on *May* the firſt day, a little after noon, in twenty one degrees of *Taurus*, among the *Pleiades*, a turbulent Conſtellation. It will be a great Eclipſe: and ſo ſaith *Argol*. It is within a degree of the North Node, and viſible.

The ſecond will be on *October* the twenty ſixth day, about ſix of the Clock in the Morning: it happens in thirteen degrees of *Scorpio*, near the Stars of the Ballance. This will be a great Eclipſe alſo, but not perceptible to us, it being almoſt over before the Sun riſes to us in *England*. It falls very near to the Moons South Node, and therefore the more remarkable for its Magnitude and Effects.

AN

AN EPHEMERIS OF THE Celeſtial Motions AND ASPECTS,

For the Year of our LORD, 1688.

Reſpecting the Meridian of *London.*

Being from the

	Years.
Flood of *Noah*	3981
Building of *London*	2795
Death of *Alexander Magnus*	2011
Beginning of the Julian Year	1732
Death of *Jeſus Chriſt*	1655
Flight of *Mahomet*	1097
Correcting the Calender by P. *Gregory*	106
Reſtauration of King *Charles* II.	28
Burning of *London*	22

OF

OF THE

ECLIPSES

Which will happen in this Year, 1688.

FOUR times will the Luminaries be Eclipſed to us that inhabit this Globe of Earth, twice the Sun, and as often the Moon; and they happen in the order following.

The firſt Eclipſe will be of the Moon, on *April* the fifth day, about ſix a Clock in the Evening; it happens in 26 degrees of *Libra*, and will be a great Eclipſe, but not to be ſeen of us, becauſe the Moon at that time will be under the Earth.

The ſecond will be an Eclipſe of the Sun, on *April* the twentieth day about one a Clock in the Morning; it happens in eleven degrees of *Taurus*; and will be inviſible unto us, but may be ſeen of our *Antipodes*, almoſt in their very Meridian.

The third will be an Eclipſe of the Moon, on the twenty ninth day of *September*, about ten of the Clock in the Morning; it happens in ſeventeen degrees of *Aries*; and will be inviſible in our Hemiſphere, the Sun being above the Earth.

The fourth will be an Eclipſe of the Sun, on *October* the fourteenth day, about ſeven of the Clock in the Morning: 'tis Celebrated in two degrees of the Celeſtial *Scorpion*; and the latter part of it may be ſeen in *England*, but the former cannot, becauſe it will be over before the Sun riſeth to us.

☞ On the ſeventh day of *November* there will happen a Conjunction of *Saturn* and *Mars*, in one degree of *Scorpio*, to aggravate the effects of the Solar Eclipſe.

OF

OF THE ECLIPSES OF THE LUMINARIES

Which happen in this Year, 1689.

IN this year there will be two Eclipſes, and both of the leſſer Luminary, the Moon; they will be both Viſible, Total and Central, in our Hemiſphere.

The firſt of them will be on the five and twentieth day of *March*, about ſeven of the Clock at night; and is Celebrated in the fifteenth degree of *Libra*, in the very degree of her South Node. It begins in the twelfth Angle, *viz.* the Angle of Sorrow, Labour and Impriſonment, and ends in the tenth Angle, or the Middle or Heart of Heaven. *Saturn* is in the Horoſcope, in Quadrate of *Mars*, at the beginning thereof; and *Mercury* is in oppoſition of the Moon. Let Aſtrologers tell ye the meaning of it when the year comes.

The ſecond of them is on *September* the nineteenth day, about two a Clock in the Morning, and Celebrated in ſeven degrees of *Aries*. In the Figure hereof *Mercury* oppoſes the Moon, as in the former; and the two Infortunes are in Oppoſition: The Eclipſe happeneth in the Houſe of Death, and endeth in the Angle of Quarrels, Strifes and Contentions. They are two very famous Eclipſes, and fit to be obſerved in their ſhapes, and effects alſo; for that they afford matter of Admiration, as well as Pains, both to the Induſtrious Aſtronomer and Aſtrologer.

OF THE
ECLIPSES
OF THE
LUMINARIES
Which happen in this Year, 1690.

THere will happen in this Revolution of the World four Eclipſes of the Luminaries, two of the Sun, and as many of the Moon: I ſhall mention them in the order they happen.

The firſt will be an Eclipſe of the Sun on *February* the twenty and eighth day about our eleven of the Clock at Night: it is Celebrated in twenty two degrees of *Piſces*, and will be inviſible unto us in *England*, but to our Antipodes the Sun will be above half darkned, it falls near their Meridian.

The ſecond will be a Lunar defect, on the fourteenth day of *March*, about ten of the Clock at Night: it is Celebrated in five degrees of the Celeſtial *Balance*, and will be viſible to us in *England*. The envious Planet *Saturn* riſes in the Eaſt at the time of this Eclipſe, and *Mars* Lord of the Horoſcope is in the eighth Angle, in Quadrate of *Jupiter* and *Mercury*.

The third will be a ſolar Deliquium on *Auguſt* the twenty fourth day, about one of the Clock in the Morning: it happens in eleven degrees of the Celeſtial *Virgin*. This alſo will be a great Eclipſe, *viz.* near eight parts of the Suns body will be darkned, but it will be inviſible as to us.

The fourth will be an inviſible Eclipſe of the Moon, on *September* the eighth day, about our two of the Clock afternoon. It happens in 26° of *Piſces*.

☞ On *November* the 20th this year will be Celebrated a famous Conjunction of *Saturn* and *Mars* in 23 degrees of *Scorpio*. Such a Conjunction preceeded the Sweating Sickneſs, 1485.

OF THE
ECLIPSES
OF THE
LUMINARIES

Which will be Celebrated in this Year, 1691.

IN this year of 1691. there will happen two Eclipſes of the Sun, but none of the Moon will fall in any part of this our Earthly Globe in all this Solar Revolution. Thoſe of the Sun follow in order thus.

The firſt of the Eclipſes of the Sun will happen on *February* the eighteenth, about our five of the Clock in the Morning; it is Celebrated in ten degrees of *Piſces*, and will be a great Eclipſe in it ſelf; but as to us in *England* it will be inviſible, the Sun being then *ſub terra*.

The ſecond Eclipſe of the Sun will be on *Auguſt* the thirteenth day near ſix of the Clock at night; it is Celebrated in one degree of *Virgo*, and will be viſible to us in *England* if the Air be ſerene: it will be a great Eclipſe, three fourths of the Sun's body will be obſcured. The envious Planet *Saturn* rules the Horoſcope, and will be in the ninth Angle, in Platick Oppoſition of *Jupiter*: *Mercury* governs the Eclipſe, and *Mars* from *Gemini*, (in Conjunction of the *Bulls Eye*) caſts an angry Quadrate both at the Eclipſed Sun and him. *Verbum ſat.*

☞ On the twenty fifth day of *July* is Celebrated a famous Oppoſition of *Saturn* and *Mars*; one of them is with the Pleiades, and the other in Oppoſition unto that turbulent Conſtellation. The effects whereof will not only be ſeen in the Air, but in the Actions and Paſſions of humane kind; I mean that part of them that are ſubject to thoſe two Signs wherein the Oppoſition is made, *viz.* *Taurus* and *Scorpio*.

OF

OF THE

ECLIPSES

Which will happen in this Year, 1692.

THere will happen in this year five Eclipſes of the Luminaries, *viz.* three of the Sun, and two of the Moon; but ſcarce any of them will be much ſeen by us in *England*, three of them being wholly inviſible to us, and the other two but ſmall Eclipſes.

The firſt will be an Eclipſe of the Moon, on *January* the 23 day, about two of the Clock in the Afternoon, in 14 degrees of *Leo*, inviſible as to us, but viſible and total in the more Southern parts of the world.

The ſecond will be a ſmall Eclipſe of the Sun, on *February* the 9th day, near our five of the Clock in the Afternoon, in the later part of *Aquarius* and inviſible to us.

The third Eclipſe will be of the Moon, upon the 18th day of *July*, near our four of the Clock in the Morning; it will be a great Eclipſe, and moſt of it may be ſeen of us, if the Air prove clear. It is Celebrated in the ſixth degree of *Aquarius*.

The fourth will be an Eclipſe of the Sun, upon the ſecond day of *Auguſt*, ſomewhat paſt nine in the Morning, in 20 degrees of *Leo*, it may be ſeen with us, if obſerved with good Glaſſes for that purpoſe.—'Tis the Sun that is Eclipſed thus, in *Leo* his own Manſion houſe: Let Aſtrologers tell you what it means when the year comes, in the mean time I'll tell them it will be but a ſmall Eclipſe, and but a fourth part of the Suns body loſeth light.

The laſt is an Eclipſe of the Sun, on *December* the 27th. two hours afternoon, in 17 degrees of *Capricorn*, but it being ſo ſmall, *viz.* but one twelfth part, it will hardly be ſeen of us.

AN

AN EPHEMERIS OF THE Celeſtial Motions AND ASPECTS,

For the Year of our LORD, 1693.

OF

OF THE

ECLIPSES

Which will happen in this Year, 1693.

FOur times will the inhabitants of this earthly Star whereon we live have the Luminaries of Heaven Eclipſed from their ſight; twice the Sun, and as often the Moon; and they follow thus.

The firſt will be a great Eclipſe of the Moon on the 12th day of *January*, about our four of the Clock in the Morning, in the beginning of the Celeſtial *Lyon*; it will be a viſible and a total, nay, almoſt Central Eclipſe, and worthy the induſtrious Aſtronomers obſervation.

The ſecond will be a great Solar Deliquium on *June* the 23th day, a little after noon: It happens in 12 degrees of the Tropical Sign *Cancer*; it will be almoſt as great an Eclipſe as that which happen'd on *March* 29. 1652. and viſible unto us alſo.

The third will be a great Eclipſe of the Moon, upon *July* the 7th day, near our ten of the Clock in the morning: It is Celebrated in 25 degrees of the Heavenly *Crab*; but as to us in *England* will be inviſible, the Moon being at that time *ſub terra*.

The laſt will be a Solar defect in 6 degrees of *Capricorn*, on *December* 16 about our mid-night: It will be a great Eclipſe, but viſible to our Antipodes. Thus much of Eclipſes this year, 1693.

AN

AN

EPHEMERIS

OF THE

Celeſtial Motions

AND

ASPECTS,

For the Year of our LORD, 1694.

Reſpecting the Meridian of *London.*

Being from the		Years.
	Flood of *Noah*	3987
	Building of *London*	2801
	Death of *Alexander Magnus*	2017
	Beginning of the Julian Year	1738
	Death of *Jeſus Chriſt*	1661
	Flight of *Mahomet*	1103
	Correcting the Calender by P. *Gregory*	112
	Reſtauration of King *Charles* II.	34
	Burning of *London*	28

LONDON,

Printed by *J. Macock*, for the Company of *Stationers*, 1679.

JANUARY hath xxxi days.

The Planets daily Motions.

ECLIPSES
Which will happen in this Year, 1694.

THere will happen unto the Inhabitants of this darker Star, the Earth, four Eclipſes of the two bright Lights of Heaven in this year, 1694. two of the Sun, and two of the Moon; and they happen in the following order.

The firſt will be an Eclipſe of the Moon, on the firſt day of *January*, about our Noon-time; it is Celebrated in 22 degrees of *Cancer*, but will be inviſible as to us, yet a great Eclipſe to thoſe that inhabit our Antipodes.

The ſecond will be a defect of the Sun, on the 12 day of *June*, in the very beginning of *Cancer*, near our 5 a Clock at night; at which time more than half of the Sun's body will be obſcured from our ſight, and we may, if the Air be clear, obſerve the ſame in *London*, and *England*, *&c.*

The third will be an Eclipſe of the Moon, in 15 degrees of *Capricorn*, on *June* the 26 day, about our midnight: and although it will be but a ſmall Eclipſe, yet it may be ſeen by any induſtrious diligent obſerver.

The laſt will be a defect of the Sun, on *December* the 6 day, near 5 a Clock at night, and therefore inviſible as to us. But it happening in 25 degrees of *Sagittary* we may be concerned in the effects thereof; the place Eclipſed being in Oppoſition to *Gemini*, the Horoſcope of *London*.

OF THE

ECLIPSES

Which will happen in this Year, 1695.

THis Year 1695. will produce Four Eclipſes of the Luminaries, *viz.* Two of the Sun, and as many of the Moon: and they thus happen.

The Firſt will be a Lunar defect, on *May* the 18 day, about our Ten of the Clock in the Morning, and therefore inconſpicuous as to us. The Moon will loſe her light in *Sagittary* near her North Node, and the *Scorpions* Heart.

The Second will be a Solar Deliquium, on *June* the firſt, about five a Clock at night, in 21 degrees of *Gemini:* It is Celebrated in the eight Houſe of the Heavens; it bodes mortality to great Perſonages, Popular Inſurrections, *&c.*

The Third will be an Eclipſe of the Moon, on *November* the tenth day, at our eight a Clock in the Evening, among the Stars of the Pleiades; and, if the Air be clear, one third of the Moons body may be ſeen to loſe its light.

The laſt will be a ſmall Eclipſe of the Sun, on *November* 26, about ſeven a Clock in the Morning, in 15 degrees of the Celeſtial *Archer*, but will not be perceptible to us, becauſe the Sun will then be under our Horizon.

☞ On the twelfth day of *Auguſt* this year, there will happen a famous Oppoſition of ♃ and ♂, in 8 degrees of ♋ and ♑, which I leave unto the Ingenious Aſtrologer to deſcant on when the year cometh.

AN

AN

EPHEMERIS

OF THE

Celestial Motions

AND

ASPECTS,

For the Year of our LORD, 1696.

OF

OF THE
ECLIPSES
Which will happen in this Year, 1696.

IN this year of 1696. there will happen but two viſible Eclipſes only, and they will be both of the leſſer Light the Moon. There will be two alſo of the Sun, but inviſible in our Horiſon. They of the Moon thus happen, *viz.*

The firſt defect of the Moon will be on *May* the 6 day, about Midnight, in 27 degrees of the Martial Sign *Scorpio*; the Moon loſeth her light on the very Cuſpe of the Angle of Honour, it will be a viſible and total Eclipſe.

The ſecond will be on *October* the 30 day, about four in the morning, and is Celebrated in 18 degrees of *Taurus*; this alſo is a great, viſible and total Eclipſe, and happens in the eight Angle of the Heavens. The Moon is Eclipſed exactly in her Southern Node.

☞ On the fourteenth day of *December* will happen a famous Conjunction of *Saturn* and *Mars* in 26 degrees of *Capricorn*, and will be famous in its effects alſo, eſpecially in the more Southern parts of the world; and to all particular perſons that are concerned in the degree wherein the Conjunction is made.

OF THE

ECLIPSES

Which will happen in this Year, 1697.

THere will happen in this year 1697. three Eclipſes of the Luminaries, one of the Sun, and two of the Moon; but there will but one of the Moon be viſible unto us; they happen in this order.

The firſt will be an inviſible Eclipſe of the Sun on *May* the 11 day, about our one of the Clock in the Morning: it is Celebrated in the beginning of the Celeſtial Sign *Taurus*. The envious Planet *Saturn* at the ſame time caſts a Quadrate Aſpect to the Luminaries.

The ſecond will be a Lunar Deliquium, on *May* the 26 day, about our 8 in the Morning, in 16 degrees of the Celeſtial *Scorpion*; but will be inviſible to us, *Luna* being *ſubter terram*.

The laſt will be a Lunar defect, on *October* the 19. about our 8 a Clock at night; it will be a viſible, and almoſt total Eclipſe; it happens in the eleventh Angle of the Heavens. The Moon is Eclipſed in her Exaltations; and envious *Chronus* is in Quadrate to the Luminaries, as in the Solar Eclipſe in *May* before mention'd.

☞ On *Auguſt* the 27. day in this year there will be Celebrated a great oppoſition of *Saturn* and *Mars* from the beginning of *Leo* and *Aquarius*, and doth betoken a very ſickly Autumn.

AN

AN

EPHEMERIS

OF THE

ECLIPSES

OF THE

LUMINARIES

Which happen in this Year, 1698.

IN this year there will happen two Solar Eclipſes, the one of them happens before the Sun's Apogæon, and the other after it; ſo that there can be no Full Moon Eclipſe in all this year.

The firſt Solar Eclipſe will happen on *March* the 31ſt day, about the Sun-ſetting with us, and therefore not to be ſeen by us. Howbeit, it will prove a great Eclipſe in it ſelf, and happens near to the place wherein the Sun is exalted.

The ſecond Solar Eclipſe of this year will happen on *September* the 24th day, near our four of the Clock in the morning, in eleven degrees of the Celeſtial *Ballance*. This alſo will be a great Eclipſe, but inviſible unto us.

☞ On the 29th day of *Auguſt* in this year, there happens a famous Conjunction of *Jupiter* and *Mars* in 22 degrees of the Celeſtial Sign *Scorpio*. It portends afflictions to the Northern parts of the world; chiefly, places near to the Sea; and occaſions great Naumachies, Shipwracks, Inundations, with many various misfortunes, &c.

AN

AN

EPHEMERIS

OF THE

Celeſtial Motions

AND

OF THE

ECLIPSES

OF THE

LUMINARIES

Which happen in this Year, 1699.

FOur times will the Luminaries of Heaven be obſcured in this year 1699. Twice the Sun, and as often the Moon; and they happen thus.

The Firſt will be an Eclipſe of the Sun, on *March* the 5th day, at our eight a Clock at Night, in 26 degrees of the Celeſtial *Virgin*; it will be a viſible Eclipſe, and ten parts of the Moons body will be darkned.

The Second will be of the Sun, on *March* 21. about our eight in the Morning, it happens in 11 degrees of *Aries*. It will be but a ſmall Eclipſe, and ſcarcely will be viſible to us.

The Third will be an Eclipſe of the Moon, on *Auguſt* the 30th day, near our Noon, and muſt therefore be inviſible as to us: It is Celebrated in 17 degrees of the Celeſtial *Fiſhes*, and will be a total and viſible defect unto ſuch as inhabit our *Antipodes*.

The laſt will be an Eclipſe of the Sun, on *September* the 13th day, about eleven of the Clock before Noon; and it is Celebrated in the beginning of *Libra*. It will be a great and viſible Eclipſe; and ten digits of the Suns body will be darkned.

☞ It's obſervable alſo, that at the time of this Eclipſe, there happens an Oppoſition of the two Infortunes ♄ and ♂ from ☊ and ♒, which will notably aggravate the effects thereof.

OF

OF THE
ECLIPSES
OF THE
LUMINARIES

Which will happen in this Year, 1700.

IN this year of 1700 there will happen but two Eclipſes, and they will be both of the Moon; but no New Moon Eclipſe ſhall we have in this year. Thoſe of the Moon, are thus expreſſed.

The Firſt Lunar Deliquium will be Celebrated on *February* the 23th day, about our ſix of the Clock in the Morning; it happens in 15 degrees of the Celeſtial *Virgin*. And, inaſmuch as it falls in a Humane Sign, it will principally pour down its effects on Humane kind. This will be viſible and total, even in our weſtern Horiſon.

The Second will be an inviſible Lunar defect, on *Auguſt* the 18th day, about our two of the Clock in the Afternoon; and it is Celebrated in 6 degrees of the *Fiſhes*. It will be a great Eclipſe in its ſelf, but inviſible as to us, as beforeſaid.

☞ On *December* the 23th this year will happen a notable Conjunction of ♄ and ♂ in 10 degrees of the Celeſtial *Fiſhes*. And what Country, City, People, Nation, Perſon, or thing ſoever, hath any relation to that part of the Sign wherein this Conjunction is made, will be moſt eminently concern'd in its effects.

AN

OF

OF THE

ECLIPSES

OF THE

LUMINARIES

Which will happen in this Year, 1701.

IN this year there will be Four Eclipſes of the Luminaries, *viz.* two of the Sun, and two of the Moon, and they happen in this following order.

The Firſt will be an Eclipſe of the Sun, on the 28th day of *January* about our One of the Clock in the Morning, in 19 degrees of the Celeſtial *Water-bearer*; it will not be ſeen of us, but to our Antipodes two thirds of the Sun's body will be darkned from their ſight.

The Second will be a Lunar defect, on *February* the 11th, at our Ten a Clock at Night; it happens in 4 degrees of the *Virgin*, and will be viſible in our Horiſon, there being more than half the Moons body obſcured from our ſight.

The Third will be a Solar defect on *July* the 24th, about our Nine a Clock in the Morning, in 12 degrees of the Celeſtial *Lyon*; it will be viſible with us, the Suns body being darkned above one half of it.

The Laſt will be an Eclipſe of the Moon, on *Auguſt* the 7th day, about our Two of the Clock in the Afternoon, and therefore inviſible as to us. It is Celebrated in 25 degrees of *Aquarius*. Thus much for the Eclipſes of this year, and for the whole Ephemerides.

FINIS.

MVSEVM BRITAN NICVM
